

NIKITA CHUCHELOV

SOFTWARE DEVELOPER | DATA ENGINEER

chucheloff@gmail.com | linkedin.com/in/chuchelov | +77000556848 | Almaty, Kazakhstan

SUMMARY

Software Engineer with 5+ years in fintech, spanning QA automation, backend development, and data engineering. Builds production-grade systems end-to-end — from REST APIs and LLM integrations to ETL pipelines and financial reporting tooling.

SKILLS

Python, VBA, C#, DLT, FastAPI, Ollama, ClickHouse, MinIO, SQL, C#, AvaloniaUI, Git, Docker, ArgoCD

EXPERIENCE

• Software Developer | Data Engineer, RUDATA (Interfax Digital Solutions) — 2020-Present Moscow, Russia

- Built a cross-platform financial reporting automation tool using AvaloniaUI on C#, enabling clients to embed live analytics directly into quarterly reports and eliminating manual data export workflows
- Engineered an ETL pipeline in Python with DLT, consolidating data feeds from multiple stock exchanges into a unified data store to improve internal reporting consistency and future-proof the architecture for new source integrations
- Developed core market analysis modules as part of the Excel Add-in solution in VBA, giving analysts automated in-sheet calculations that replaced manual multi-step processes and reduced error rates in recurring reports

• Freelance Backend Developer, AV3.Studio — 2023-2025 Moscow, Russia

- Designed and deployed REST API services using FastAPI (Python) to serve self-hosted LLM models, enabling video production teams to automate content pipelines without relying on third-party AI platforms
- Integrated locally hosted LLM inference into existing client workflows using Ollama, reducing external API dependency and giving teams reproducible, low-latency AI tooling within their own infrastructure

• QA Automation Engineer, BetPlanet — 2020 - 2021 Cyprus

- Built a mobile test automation suite using Appium with WebDriverIO and JavaScript, covering iOS and Android platforms and reducing regression testing time across release cycles
- Conducted combined automated and manual testing on mobile applications to surface edge-case defects before production, improving release quality and reducing post-launch bug reports

EDUCATION

• National University of Science and Technology «MISiS», 2019-2022 Moscow, Russia

Department of Engineering Cybernetics - Applied Mathematics and Advanced Science-Based Software Algorithms.
